

## UNITED STATES PATENT AND TRADEMARK OFFICE

UNITED STATES DEPARTMENT OF COMMERCE  
United States Patent and Trademark Office  
Address: COMMISSIONER FOR PATENTS  
P.O. Box 1450  
Alexandria, Virginia 22313-1450  
[www.uspto.gov](http://www.uspto.gov)

APPLICATION NO.	FILING DATE	FIRST NAMED INVENTOR	ATTORNEY DOCKET NO.	CONFIRMATION NO.
10/768,409	01/30/2004	Cynthia Kae Florkey	LUC-466/Florkey 16-10-24	6926
32205	7590	01/05/2009	EXAMINER NGUYEN, KHAI N	
PATTI, HEWITT & AREZINA LLC ONE NORTH LASALLE STREET 44TH FLOOR CHICAGO, IL 60602			ART UNIT 2614	PAPER NUMBER PAPER
		MAIL DATE 01/05/2009	DELIVERY MODE	

Please find below and/or attached an Office communication concerning this application or proceeding.

The time period for reply, if any, is set in the attached communication.

<b>Office Action Summary</b>	<b>Application No.</b> 10/768,409	<b>Applicant(s)</b> FLORKEY ET AL.
	<b>Examiner</b> Khai N. Nguyen	<b>Art Unit</b> 2614

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --  
**Period for Reply**

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133).

Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

#### Status

1) Responsive to communication(s) filed on 30 January 2004.

2a) This action is FINAL.      2b) This action is non-final.

3) Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

#### Disposition of Claims

4) Claim(s) 1-25 is/are pending in the application.

4a) Of the above claim(s) \_\_\_\_\_ is/are withdrawn from consideration.

5) Claim(s) \_\_\_\_\_ is/are allowed.

6) Claim(s) 1-25 is/are rejected.

7) Claim(s) \_\_\_\_\_ is/are objected to.

8) Claim(s) \_\_\_\_\_ are subject to restriction and/or election requirement.

#### Application Papers

9) The specification is objected to by the Examiner.

10) The drawing(s) filed on \_\_\_\_\_ is/are: a) accepted or b) objected to by the Examiner.  
 Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).  
 Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).

11) The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

#### Priority under 35 U.S.C. § 119

12) Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).

a) All    b) Some \* c) None of:

1. Certified copies of the priority documents have been received.
2. Certified copies of the priority documents have been received in Application No. \_\_\_\_\_.
3. Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

\* See the attached detailed Office action for a list of the certified copies not received.

#### Attachment(s)

**DETAILED ACTION**

***Response to Amendment***

1. Applicant's request for reconsideration of the finality of the rejection of the last Office action on June 17, 2008 is not persuasive and, however, further reviews of claims language and specification results into the new 35 U.S.C. 101 rejections as set forth below. Therefore, the finality of that action is withdrawn.

***Claim Rejections - 35 USC § 101***

2. 35 U.S.C. 101 reads as follows:

Whoever invents or discovers any new and useful process, machine, manufacture, or composition of matter, or any new and useful improvement thereof, may obtain a patent therefor, subject to the conditions and requirements of this title.

3. Claims 1-17, and 22-25 are rejected under 35 U.S.C. 101 because the claimed invention is directed to non-statutory subject matter. Claims 1-17, and 22-25 according to the specification "comprises a plurality of components such as computer software" (see instant application's specification page 14 lines 21-22). Therefore, these claims are interpreted as software claims which are non-statutory. Software, or logic, or any type of "functional descriptive material", is not statutory when claimed as descriptive material, per se. See pages 50-57 of "Interim Guidelines for Examination of Patent Applications for Patent Subject Matter Eligibility".

4. Claims 18-20 are rejected under 35 U.S.C. 101 as not falling within one of the four statutory categories of invention. Supreme Court precedent<sup>1</sup> and recent Federal Circuit decisions (*In re Bilski*, 88 USPQ2d 1385 (Fed. Cir. 2008)) indicate that a statutory “process” under 35 U.S.C. 101 must (1) be tied to another statutory category (such as a particular apparatus), or (2) transform underlying subject matter (such as an article or material) to a different state or thing. While the instant claim(s) recite a series of steps or acts to be performed, the claim(s) neither transform underlying subject matter nor positively tie to another statutory category that accomplishes the claimed method steps, and therefore do not qualify as a statutory process.

For example, claim 18 appears to have a mere manipulation of data (automatically updating,), and does not have any tangible, useful and concrete result. The step of “automatically updating” provisioning components to port a directory number can be done by an agent/person. No practical application is provided, since all of the recited steps can be performed in the mind of a user/person or by the use of a pencil and paper.

5. Claim 21 is rejected under 35 U.S.C. 101 because the claimed invention is directed to non-statutory subject matter. Claim 1 appears to directed to a manufacturing (a computer-readable medium having computer executable instructions), however according to the specification the medium is disclosed as “computer-readable signal-bearing medium” which may be a “modulated carrier signal transmitted over a network”,

---

<sup>1</sup> *Diamond v. Diehr*, 450 U.S. 175, 184 (1981); *Parker v. Flook*, 437 U.S. 584, 588 n.9 (1978); *Gottschalk*

and medium such as "magnetic, electrical, optical" (See the instant specification page 15 lines 4-13). Signals, magnetic field, and carrier signal did not fall within at least one of the four enumerated categories of patentable subject matter recited in section 101 (i.e., process, machine, manufacture, or composition of matter).

Therefore, the claimed invention can be interpreted as carrier signal, signals, or electric/magnetic fields which are not statutory subject matter.

***Claim Rejections - 35 USC § 103***

6. The text of those sections of Title 35, U.S. Code not included in this action can be found in a prior Office action.

7. Claims 1-20 and 22-24 are rejected under 35 U.S.C. 103(a) as being unpatentable over Mazzarella et al. (U.S. Patent Number 6,819,921 hereinafter "Mazzarella") in view of Moss et al. (U.S. Patent Number 6,785,372 hereinafter "Moss").

Regarding claim 1, Mazzarella teaches an apparatus and method, comprising: a portability component that automatically updates one or more provisioning components (see Fig. 1) to port a directory number for a duration of time wherein a value for the duration of time comprises a date in the future, and wherein the directory number is not limited to wireless directory number (column 3, lines 5-9).

---

v. Benson, 409 U.S. 63, 70 (1972); *Cochrane v. Deener*, 94 U.S. 780, 787-88 (1876).

Although Mazzarella teaches a directory number portability for the wireless service providers, but there is no mention in the disclosure that the method is limited to wireless directory number only. On the contrary, for example, Mazzarella teaches the method of porting a directory number by using the local directory number (LDN) on the public switched telephone network (PSTN) (col. 3 lines 29-40).

Mazzarella teaches to port a directory number for a duration of time. However, Mazzarella does not specifically disclose the duration of time comprise a date in the future.

In the same field of endeavor, Moss teaches a method and apparatus to provide telephone services for a predetermined period of time (Moss - see abstract), and for a date in the future (Moss - col. 6 lines 29-30). The advantage of Moss et al is the notification timer that can be implemented as a programmable timer (i.e., to support any service period length) in the service control point (SCP) (Moss – Fig. 3, 53 Notification Timer, col. 3 line 67, and col. 4 lines 2-4).

Therefore, it would have been obvious to a person of ordinary skill in the art at the time the invention was made to incorporate the feature of programmable service period length (e.g. for a date in the future), as taught by Moss, into Mazzarella's method

and system in order to enhance the customer service quality by providing the feature of porting a directory number for any service period length as desired.

Regarding claim 2, Mazzarella teaches upon accepted a request to port the directory number, the portability component receives one or more identifiers associated with one or more provisioning components and uses those identifier to notify the provisioning components of the request to port the directory number (Fig. 1, col. 3 lines 10-15).

Regarding claim 3, Mazzarella teaches the request to port the directory number comprises an association between the directory number and a location routing number, the portability component provides the association to a management component, and one or more network components cooperate to provide and/or terminate service for the directory number (Fig.1, col. 3 lines 33-36).

Regarding claim 4, Mazzarella teaches the portability component communicates with the ported-from provisioning component and ported-to provisioning component through employment of the identifiers to terminate service and provide service for the telephony device (Fig. 1, col. 3 lines 16-21).

Regarding claim 5, Mazzarella teaches the portability component cooperates with the provisioning component of the first service provider and the provisional component

of the second service providers to port the directory number from the first service provider to the second service provider (Fig. 1, col. 3 lines 29-32).

Regarding claim 6, Mazzarella teaches the portability component cooperates with the ported-from provisioning component to terminate the access to the first set of services by the telephony device, and with the ported-to provisional component to provide access to the second set of services by the telephony device (Fig. 1, col. 3 lines 46-48).

Regarding claim 7, Mazzarella teaches upon expiration of the duration of time, the portability component in combination with one or more provisioning components port the directory back to the initial state (col. 4 lines 41-45). It is well known by those skilled in the art that service order cancellation will be automatically activated and the ported directory will be back to the initial state if there is no response from the subscriber.

Regarding claim 8, Mazzarella teaches the ported-to provisioning component initiates a request to the portability component to port the directory number; the portability component notifies the ported-from provisioning component of the request (col. 3 lines 46-50).

Regarding claim 9, Mazzarella teaches a subscriber database that comprises a subscriber entry for the directory number (col. 2 lines 42-45); the portability component

Art Unit: 2614

and the ported-from provisioning component cooperate to change the subscriber entry in the subscriber database from the initial state to a ported state and from ported state to initial state (col. 4 lines 1-8).

Regarding claim 10, Mazzarella teaches upon the portability component and the ported-from provisioning component cooperate to change the subscriber entry in the subscriber database, the subscriber database and the switch component cooperate to restart the service at the network for the telephony device associated with the directory number (col. 4 lines 9-12).

Regarding claims 11-12, Mazzarella teaches the subscriber database and the switch component cooperate to notify one or more callers and a user of the telephony device associated with the directory number of a period of time remaining until the expiration of the time to port the directory number (col. 4 lines 31-37).

Regarding claims 13-15, Mazzarella teaches a timer component that determines an expiration of the duration of time to port the directory number based on the value for the duration of time (col. 3 lines 33-40); and upon receipt of the notification from the timer component, and then the provisioning components port the directory number back to initial state (col. 4 lines 31-37). Again, it is well known by those skilled in the art that service order cancellation will be automatically activated and the ported directory will be back to the initial state if there is no response from the subscriber.

Regarding claims 16-17, Mazzarella teaches the portability components employs the interfaces to receive the identifiers and a value of the duration of time (col. 4 lines 1-8); and upon an expiration of the duration of time, the portability component removes the association between the directory number and the location routing number (LRN), wherein a telephony device receives service associated with the directory number and/or location routing numbers (col. 4 lines 9-26).

Regarding claim 18, Mazzarella teaches a method, comprising the step of: automatically updates one or more provisioning components (see Fig. 1) to port a directory number for a duration of time, wherein a value for the duration of time comprises a date in the future, and wherein the directory number is not limited to wireless directory number (column 3, lines 5-9).

Although Mazzarella teaches a directory number portability for the wireless service providers, but there is no mention in the disclosure that the method is limited to wireless directory number only. On the contrary, for example, Mazzarella teaches the method of porting a directory number by using the local directory number (LDN) on the public switched telephone network (PSTN) (col. 3 lines 29-40).

Mazzarella teaches to port a directory number for a duration of time. However, Mazzarella does not specifically disclose the duration of time comprise a date in the future.

In the same field of endeavor, Moss teaches a method and apparatus to provide telephone services for a predetermined period of time (Moss - see abstract), and for a date in the future (Moss - col. 6 lines 29-30). The advantage of Moss et al is the notification timer that can be implemented as a programmable timer (i.e., to support any service period length) in the service control point (SCP) (Moss – Fig. 3, 53 Notification Timer, col. 3 line 67, and col. 4 lines 2-4).

Therefore, it would have been obvious to a person of ordinary skill in the art at the time the invention was made to incorporate the feature of programmable service period length (e.g. for a date in the future), as taught by Moss, into Mozzarellas' method and system in order to enhance the customer service quality by providing the feature of porting a directory number for any service period length as desired.

Regarding claim 19, Mazzarella teaches a method, comprises the steps of:

- receiving a request to port the directory number; request comprises one or more identifiers associated with one or more provisioning components (Fig. 1, col. 3 lines 10-15); a value for the duration of time (col. 3 lines 33-40); and an association between the directory number and a location routing number (LRN) (col. 4 lines 9-12);
- providing the association to the provisioning components through employment of the identifiers upon receipt of the request (Fig. 1, col. 3 lines 16-21);
- setting a ported-out flag associated with the directory number (col. 4 lines 16-18);
- determining an expiration of the duration of time through employment of the value of time (col. 4 lines 31-32);

notifying the provisioning components through employment of the identifiers upon the expiration of time (col. 4 lines 1-8);

clearing the ported-out flag associated the directory number upon the expiration of time (col. 4 lines 16-19).

Regarding claim 20, Mazzarella teaches a method further comprising the steps of:

porting the directory number from first service provider to the second service provider (col. 3 lines 10-16);

terminating service for telephony device associated with the directory number of the first service provider if no response from the subscriber (col. 4 lines 33-37);

providing service for the telephony device by the second service provider (col. 4 lines 19-22);

receiving a notification of the expiration of time (col. 4 lines 31-37);

porting the directory number from first service provider to the second service provider (col. 3 lines 10-16);

terminating service for the telephony device associated with the directory number with the second service provider (col. 4 lines 16-18);

providing a message indicating the expiration of time to a user of the telephony associated with the directory number (col. 4 lines 37-40).

Regarding claims 22-24, Mazzarella discloses everything claimed as applied in claim 1 in order to port a directory number for a duration of time. Thus, a permanent status is automatically supported by the inherent design of Mazzarella's apparatus and method.

However, Mazzarella does not specifically disclose the value for the duration of time comprises a period of time and/or the date in the future.

In the same field of endeavor, Moss teaches a method and apparatus to provide telephone services for a predetermined period of time (Moss - see abstract), for a date in the future (Moss - col. 6 lines 29-30), or any service period length (Moss - col. 6 lines 42-43).

Therefore, it would have been obvious to a person of ordinary skill in the art at the time the invention was made to incorporate the feature of a period of time and the date in the future, as taught by Moss, into Mazzarella's method and system in order to enhance the customer service quality by providing the feature of porting a directory number for any service period length as desired.

8. Claim 21 is rejected under 35 U.S.C. 103(a) as being unpatentable over Mazzarella in view of Petrunka (U.S. Patent Number 6,584,193), and further in view of Moss.

9. Regarding claim 21, Mazzarella discloses everything claimed as applied above (see claims 1 and 18) in order to port a directory number for the duration of time. Thus,

a permanent status is automatically supported by the inherent design of Mazzarella's apparatus and method, and the method is not limited to wireless directory number (see claims 1 and 18 above).

However, Mazzarella does not specifically disclose the value for the duration of time comprises a date in the future, and also fail to specifically disclose the invention is readily implementable as one or more computer-readable signal-bearing media.

In the same field of endeavor, Petrunka discloses a method and system for using the existing Local Number Portability (LNP) infrastructure to intercept all calls to a subscriber and route them to a network platform. LNP is a telephony service that allows subscribers to retain their directory number when they change service providers (Petrunka - col. 3 lines 38-45). The advantage of Petrunka's invention is an article (computer program product) with computer program code in combination with hardware implements the method or process steps described, and this computer code is stored on storage media (diskette, hard disk, CD-Rom, etc. – computer-readable signal-bearing media, Petrunka - col. 5 lines 27-40). Additionally, the computer program code can be transferred to the appropriate hardware over some type of data network (Petrunka – col. 5 lines 41-43).

In addition, and in the same field of endeavor, Moss teaches a method and apparatus to provide telephone services for a predetermined period of time (Moss - see abstract), for a date in the future (Moss - col. 6 lines 29-30). The advantage of Moss et al is the notification timer that can be implemented as a programmable timer (i.e., to

support any service period length) in the service control point (SCP) (Moss – Fig. 3 – 53 Notification Timer – col. 3 line 67, and col. 4 lines 2-4).

Therefore, it would have been obvious to person of ordinary skill in the art at the time the invention was made to provide Mazzarella with an article, comprising: one or more computer-readable signal-bearing media to implement the method or process steps for automatically updating the provisioning components to port a directory number for a duration of time comprises a date in the future, and to incorporate the feature of programmable service period length, as taught by Moss, into Mazzarella's method and system in order to enhance the customer service quality by providing the feature of porting a directory number for any service period length as desired.

10. Newly added claim 25 is rejected under 35 U.S.C. 103(a) as being unpatentable over Mazzarella in view of Moss, and further in view of Moreman (U.S. Pub. No. 2005/0074110 A1).

11. Regarding the newly added claim 25, Mazzarella and Moss disclose everything claimed as applied above (see claims 1 and 3) in order to port a directory number for the duration of time.

However, Mazzarella and Moss do not specifically disclose the employment of a Session Initiation Protocol (SIP) or a Simple Network Management Protocol (SNMP). Although both Mazzarella and Moss teach the public switch telephone network (PSTN) and the suitable communications protocols (Mazzarella - col. 3 lines 29-40, and Moss – Fig. 1, col. 4 lines 5-15).

In the same field of endeavor, Moreman teaches a system and a method that remotely switches telephony services from one service provider to another service provider according to local number portability (LNP), and employs simple network management protocol (SNMP) (See Moreman – Abstract, paragraph [0007] lines 1-13, and paragraph [0019] lines 5-11). The advantage of Moreman's system and method is customers can retain their previous telephone number without a disconnection in service when switch service provider (Moreman - paragraph [0008]).

It would have been obvious to a person of ordinary in the art at the time of the invention was made to apply a known technique to a known device (i.e., using SIP, SNMP protocols for porting a directory number in a communication network) ready for improvement to yield predictable results (see KSR – MPEP 2143). Therefore, it would have been obvious to a person of ordinary in the art to incorporate the use of SNMP protocol, as taught by Moreman, into the method and system of Mazzarella and Moss in order to enhance the porting of a directory number for a duration of time in a communication network.

#### *Response to Arguments*

12. Applicants' arguments filed March 14, 2008 have been fully considered but they are not persuasive.

In response to Applicants' argument, that the reference does not teach or reasonably suggest the functionality upon which the Examiner relies for the rejection. The Examiner first emphasizes for the record that the claims employ a broader in scope

than the Applicants' disclosure in all aspects. In addition, the Applicant has not argued any narrower interpretation of the claim limitations, nor amended the claims significantly enough to construe a narrower meaning to the limitations. Since the claims breadth allows multiple interpretations and meanings, which are broader than Applicant's disclosure, the Examiner is required to interpret the claim limitations in terms of their broadest reasonable interpretations while determining patentability of the disclosed invention. See MPEP 2111. In other words, the claims must be given their broadest reasonable interpretation consistent with the specification and the interpretation that those skilled in the art would reach. See *In re Hyatt*, 211 F.3d 1367, 1372, 54 USPQ2d 1664, 1667 (Fed. Cir. 2000), *In re Cortright*, 165 F.3d 1353, 1359, 49 USPQ2d 1464, 1468 (Fed. Cir. 1999), and *In re American Academy of Science Tech Center*, 2004 WL 1067528 (Fed. Cir. May 13, 2004). Any term that is not clearly defined in the specification must be given its plain meaning as understood by one of ordinary skill in the art. See MPEP 2111.01. See also *In re Zletz*, 893 F.2d 319, 321, 13 USPQ2d 1320, 1322 (Fed. Cir. 1989), *Sunrace Roots Enter Co. v. SRAM Corp.*, 336 F.3d 1298, 1302, 67 USPQ2d 1438, 1441 (Fed. Cir. 2003), *Brookhill- Wilk 1, LLC v. Intuitive Surgical, Inc.*, 334 F.3d 1294, 1298 67 USPQ2d 1132, 1136 (Fed. Cir.2003). The interpretation of the claims by their broadest reasonable interpretation reduces the possibility that, once the claims are issued, the claims are interpreted more broadly than justified. See *In re Prater*, 415 F.2d 1393, 1404-05, 162 USPQ 541, 550-551 (CCPA 1969). Also, limitations appearing in the specification but not recited in the claim are not read into the claim. See *In re Van Geuns*, 988 F.2d 1181, 26 USPQ2d 1057 (Fed. Cir.1993).

Therefore, the failure to significantly narrow definition or scope of the claims and supply arguments commensurate in scope with the claims implies the Applicant intends broad interpretation be given to the claims. The Examiner has interpreted the claims in parallel to the Applicant in the response and reiterates the need for the Applicant to distinctly define the claimed invention.

Regarding independent claims 1 and 18, Applicants' argument that: the combination of Mazzarella and Moss does not teach the limitations “ - - - wherein a value for the duration of time comprises a date in the future, and wherein the directory number is not limited to wireless directory numbers.” (See page 12 and page 16 lines 1-4 of Applicants' Remarks).

The Examiner respectfully disagrees. As shown in the rejection above, Mazzarella discloses porting a wireless directory number for a duration of time (See Mazzarella – Fig. 1, column 3 lines 5-9), and the directory is not limited to wire less directory number since Mazzarella does not disclose the method is limited to wireless directory number only, and Mazzarella also discloses the method to use an unused local directory number on a public switched telephone network (PSTN, i.e., wire directory number) for porting a directory number (Mazzarella - Fig.1, column 3 lines 33-40). Again, as shown in the rejection above, Moss discloses a method to provide telephone services for a determined period of time and a date in the future (e.g., 30 days from the service installation date) (See Moss - column 6 lines 29-30). Therefore,

Mazzarella and Moss combination does disclose each of the claimed limitations of independent claims 1 and 18.

In response to applicants' argument that the Mazzarella and Moss provide no motivation for the person of ordinary skill to combine the references, the Examiner recognizes that obviousness can only be established by combining or modifying the teaching of the prior art to produce the claimed invention where there is some teaching, suggestion, or motivation to do so found either in the references themselves or in the knowledge generally available to one of ordinary skill in the art. See *In re Fine*, 837 F.2d 1071, 5 USPQ2d 1596 (Fed. Cir. 1988) and *In re Jones*, 958 F.2d 347, 21 USPQ2d 1941 (Fed. Cir. 1992). In this case, Moss does suggest that the duration of time can be implemented as programmable timer so that any service period length can be provided as desired (Moss – Figs 1-2, Fig. 3, 53 Notification Timer, column 4 lines 2-4, and column 6 lines 41-43), and It would have been obvious to a person of ordinary in the art at the time of the invention was made to apply a known technique to a known device (i.e., using a programmable timer to set a duration of time for porting a directory number) ready for improvement to yield predictable results (see KSR – MPEP 2143). Therefore, it would have been obvious to a person of ordinary in the art to incorporate the notification timer, as taught by Moss, into the method and system of Mazzarella in order to enhance the porting a directory number services in a communication network.

And therefore, the rejection of independent claims 1, 18, and their dependent claims 2-17, 19-20, and 22-24 is proper and maintainable.

Also, the rejection of claim 21 as being unpatentable over Mazzarella and Petrunka and Moss is proper and maintainable since the rejection under Mazzarella and Moss being proper.

***Conclusion***

Any inquiry concerning this communication or earlier communications from the examiner should be directed to KHAI N. NGUYEN whose telephone number is (571)270-3141. The examiner can normally be reached on Monday - Thursday 6:30AM - 5:00PM.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Ahmad F. Matar can be reached on (571) 272-7488. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
